Chain restaurants will soon be required to label calories. Supermarkets self many foods that are similar to the food in restaurants, like soup, sandwiches, and mulfins. In this context, should supermarket chains be held to the same standard as restaurant chains and have to post calories for those foods?

Although the federal government is now on the verge of requiring menu labeling in restaurants, a bill proposed in Congress would create an exemption for pizza chains so that they would NOT have to provide calorie labeling inside the restaurant. The same bill would also allow supermarkets to post the calories for a salad bar or other prepared items far from where customers might be able to see the information while choosing the floots, like on a poster far away from the salad bar. Please indicate to what exent you favor or oppose such a bill.

Although the federal government is now on the verge of requiring menu labeling in restaurants, a bill proposed in Congress would create an exemption for pizza chains so that they would NOT have to provide calorie labeling inside the restaurant. The same bill would also allow supermarkets to post the calories for a salad bar or other prepared items far from where customers might be able to see the information while choosing the foods, like on a poster far away from the salad bar. Please indicate to what extent you favor or oppose such a bill.
